

118TH CONGRESS  
1ST SESSION

# H. R. 902

To provide for further comprehensive research at the National Institute of Neurological Disorders and Stroke on unruptured intracranial aneurysms.

---

## IN THE HOUSE OF REPRESENTATIVES

FEBRUARY 9, 2023

Ms. CLARKE of New York (for herself, Mr. FITZPATRICK, Ms. SCANLON, Mr. RUTHERFORD, Mr. TONKO, Mr. LYNCH, Mr. CARTER of Louisiana, Mr. TRONE, Ms. DELBENE, Mr. POCAN, Mr. CASTEN, Ms. KUSTER, Ms. DEAN of Pennsylvania, Ms. BLUNT ROCHESTER, and Ms. NORTON) introduced the following bill; which was referred to the Committee on Energy and Commerce

---

## A BILL

To provide for further comprehensive research at the National Institute of Neurological Disorders and Stroke on unruptured intracranial aneurysms.

1 *Be it enacted by the Senate and House of Representa-*  
2 *tives of the United States of America in Congress assembled,*

3 **SECTION 1. SHORT TITLE.**

4 This Act may be cited as the “Ellie Helton, Lisa  
5 Colagrossi, Kristen Shafer Englert, Teresa Anne Law-  
6 rence, and Jennifer Sedney Focused Research Act” or  
7 “Ellie’s Law”.

1 **SEC. 2. FINDINGS.**

2 The Congress makes the following findings:

3 (1) An estimated 6.6 million people in the  
4 United States, or 1 in 50 people, have an  
5 unruptured brain aneurysm.

6 (2) Each year, an estimated 30,000 people in  
7 the United States suffer a brain aneurysm rupture.  
8 Ruptured brain aneurysms are fatal in about 50 per-  
9 cent of cases. Of those who survive, about 66 per-  
10 cent suffer some permanent neurological deficit.

11 (3) Brain aneurysms are more likely to occur in  
12 women than in men by a 3 to 2 ratio. This Act rep-  
13 resents all those who have been affected and died  
14 due to a ruptured brain aneurysm, and their loved  
15 ones. People who experienced a brain aneurysm rup-  
16 ture include the following:

17 (A) Ellie Helton. On July 16, 2014, Ellie  
18 Helton, a vibrant, loving 14-year-old from Apex,  
19 North Carolina, passed away as a result of a  
20 ruptured aneurysm, stunning her parents, two  
21 sisters, and many, many loved ones. A day ear-  
22 lier, on her second day of high school, she woke  
23 up with a terrible headache after a plum-sized  
24 aneurysm on her brain stem ruptured. While  
25 she suffered headaches throughout her life, she  
26 was never diagnosed. Ellie was an avid reader

1 and excellent student, loved the arts, and was  
2 incredibly creative. She had an unwavering,  
3 constant love for the family and friends in her  
4 life.

5 (B) Lisa Colagrossi. On March 20, 2015,  
6 Lisa Colagrossi—WABC Eyewitness News re-  
7 porter, wife of 17 years, and mother of two  
8 sons—unexpectedly passed away at the age of  
9 49 years after suffering a massive ruptured  
10 brain aneurysm. Despite experiencing one of  
11 the classic warning signs of a brain aneurysm  
12 (the “worst headache of my life”), Lisa’s pass-  
13 ing came as a tremendous shock to her family  
14 and friends, who did not know what a brain an-  
15 eurysm was, let alone its signs and symptoms.  
16 She is remembered for being a loving wife, a  
17 mother, and a successful reporter, and for her  
18 love of the New York Rangers.

19 (C) Kristen Shafer Englert. On November  
20 24, 2013, Kristen Shafer Englert, a devoted  
21 wife, mother, daughter, sister, aunt, and friend,  
22 passed away from a ruptured brain aneurysm  
23 at the age of 25, just weeks after giving birth  
24 to her son. Prior to her passing, she went to the  
25 emergency room with symptoms of a brain an-

1           eurysm and was sent home without a scan.  
2           Kristen was a dedicated teacher who loved chil-  
3           dren. She was thrilled to become a mother.  
4           Sadly, she only experienced motherhood for a  
5           few short days. Kristen’s family members have  
6           been dedicated advocates since her passing.

7           (D) Teresa Anne Lawrence. On December  
8           8, 1983, Teresa Anne Lawrence, a devoted  
9           mother of three, beloved wife, and staple of her  
10          community, collapsed while visiting her son’s  
11          school. She had been struggling with and taking  
12          medication for hypertension for several years.  
13          At age 34, after being unconscious for four  
14          days, she passed away as a result of a brain an-  
15          eurysm. Her loving husband and extended fam-  
16          ily were left to raise their children, whom Te-  
17          resa cherished so much.

18          (E) Jennifer Sedney. On December 25,  
19          2013, Jennifer Sedney, a beautiful, accom-  
20          plished young woman, passed away suddenly at  
21          the age of 27 from a ruptured brain aneurysm.  
22          Her only symptom was the “worst headache of  
23          her life”, which none of her friends or family  
24          realized was a symptom of a potentially fatal  
25          condition. Jenny was a jogger, a disciplined ex-

1           erciser, and a successful health care consultant  
2           and had recently launched a health blog found-  
3           ed on three principles—“bee curious, bee radi-  
4           ant, bee well”. Her brother, mother, and father,  
5           and a large devoted network of friends and rel-  
6           atives, remember her every day.

7           (4) Brain aneurysm ruptures have a significant  
8           fiscal impact on survivors, caretakers, and the health  
9           care community. The annual estimated pre-insur-  
10          ance direct cost of brain aneurysm ruptures to  
11          American patients is approximately \$1,400,000,000,  
12          and the estimated direct cost to hospitals each year  
13          is approximately \$2,700,000,000. The length of stay  
14          in the intensive care unit is the largest driver of cost  
15          for brain aneurysm ruptures, and estimates do not  
16          reflect indirect costs including travel, food, childcare,  
17          and wage losses for patients and caretakers.

18          (5) Despite the widespread prevalence of this  
19          condition and the high societal cost it imposes on the  
20          Nation, the Federal Government only spends ap-  
21          proximately \$2.08 per year on brain aneurysm re-  
22          search for each person afflicted with a brain aneu-  
23          rysm.

24          (6) The first three iterations of the Inter-  
25          national Study on Unruptured Intracranial Aneu-

1        rysms (ISUIA) have advanced researchers’ and clini-  
2        cians’ understanding of how to most effectively man-  
3        age and treat unruptured intracranial aneurysms.

4        **SEC. 3. FUNDING.**

5        (a) AUTHORIZATION OF APPROPRIATIONS.—To con-  
6        duct or support further comprehensive research on  
7        unruptured intracranial aneurysms, studying a broader  
8        patient population diversified by age, sex, and race, there  
9        is authorized to be appropriated to the National Institute  
10       of Neurological Disorders and Stroke \$10,000,000 for  
11       each of fiscal years 2024 through 2028, to remain avail-  
12       able through September 30, 2031.

13       (b) SUPPLEMENT, NOT SUPPLANT.—Any funds  
14       made available pursuant to this section shall supplement,  
15       not supplant, other funding made available for research  
16       on brain aneurysms.

○
